

RAMALINGAM T

ramalingamthangamani2023@gmail.com | +91 6374517342 | Erode

PROFILE SUMMARY

Passionate about deploying intelligent systems that solve real-world problems. Skilled in machine learning and natural language processing, with practical experience in developing AI-powered applications. Strong foundation in Python, AI frameworks, and deployment technologies, with proven ability to integrate AI models into scalable solutions. Eager to contribute to cutting-edge projects in automation, smart systems, and AI-driven products.

EDUCATION

K S Rangasamy College of Technology, Tiruchengode

2023 – 2027

- B.Tech Artificial Intelligence and Data Science

CGPA - 7.7

SKILLS

- AI / Machine Learning Technologies:** Transformers, Multimodal AI Systems, Real-Time AI Inference, Edge AI Integration, Model Training & Deployment, Model Optimization & Hyperparameter Tuning, Data Preprocessing, MLOps, DevOps.
- 3D & XR Development:** Unity, Blender, VR/XR Development
- Programming:** Python, Java
- Tools & Others:** GitHub, Google Colab, n8n, Kaggle, Roboflow.
- UI/UX Design:** Figma, Adobe Illustrator, Wireframing, Prototyping, Design Systems

PORTFOLIO & PROFILES

- LinkedIn:** <https://www.linkedin.com/in/ramalingam05>
- Github:** <https://github.com/ramalingamthangamani>
- Portfolio:** <https://www.figma.com/proto/o5HJb6UHcOmvJiHmUWKDx4>

CERTIFICATIONS

- Virtual Internship - AI/ML Essentials – AICTE, 2024
- Generative AI Course Completion – Google Learn Platform, 2025
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
- Elements of AI – University of Helsinki, 2026
- Natural Language Processing Course – Hugging Face, 2026

INTERNSHIP EXPERIENCE

IGRAD AI Labs Pvt. Ltd. | Sep 2025 – Nov 2025 – AI Developer Intern

- Developed an AI-powered system for automatic cricket highlight generation using computer vision and deep learning. Implemented end-to-end video clipping and merging pipelines with Python, OpenCV, and MoviePy to streamline highlight creation.

IITM Pravartak Technologies Foundation | Mar 2026 – Sep 2026 – AI Research Intern

- Conducted research and development of AI-powered solutions involving machine learning, deep learning, and generative AI techniques. Contributed to model experimentation, data preprocessing, performance evaluation, and prototype development while collaborating with research teams to solve real-world engineering problems and support innovation initiatives.

PROJECTS

IWI – Intelligent Wearable Interface

- Developed an AI-powered wearable glove that captures real-time gesture recognition. Enables gesture-to-text/speech translation, human–computer interaction, and assistive communication using edge ML inference.

Thozhan - Offline Desktop Intelligence

- A secure offline AI voice assistant with speaker authentication, Tanglish speech understanding, and intent-based command execution. Integrated Whisper for speech recognition, SpeechBrain for voice verification, and custom NLP models to enable real-time, voice-controlled system automation.

AI Prescription Parser Automated Registration Suite

- Transforms handwritten and digital prescriptions into structured patient records using OCR and NLP. Automates patient registration, medical form filling, data validation, and electronic record creation, significantly reducing manual processing and improving healthcare workflow efficiency.

AI-powered Medical Assistant

- Built an agentic AI system that continuously monitors system resources, analyzes process behavior, and generates intelligent optimization recommendations. Implemented real-time performance analytics, autonomous task classification, conversational system diagnostics, and automated cleanup workflows using LLM-powered decision-making to enhance system efficiency and resource utilization.

Agentic System Analyzer & Optimizer

- Designed an intelligent platform for evaluating AI applications by analyzing prompts, models, APIs, and workflow pipelines. Detects performance bottlenecks, measures efficiency, and recommends optimizations to enhance accuracy, scalability, response time, and cost effectiveness.

Social Radar - Realtime Trend Analysis

- Built a real-time social intelligence platform that aggregates data from multiple social media platforms worldwide. Enables hashtag and keyword-based trend discovery, sentiment analysis, engagement tracking, and visualization of emerging global conversations through AI-driven analytics.

ACTIVITIES

- Attended Super Computing India - 2025 at MIT, Bangalore
- Conducted workshops based on AI for Game Development in our college.
- Engaged in Technical Symposium at Karpagam College of Engineering.
